#### 1.1 Functional Block Diagram

MT7976AN is an IEEE WiFi 6 MIMO RF chip which contains 5 GHz WI-Fi transceiver front-ends in a DRQFN package. Simplified block diagram and how MT7976AN is used are shown in <u>Figure 1-1</u>. The top control logics control each subsystem independently. Each subsystem also has dedicated LDOs. A thermal sensor and a low-speed ADC (Analog-to-Digital Converter) are provided to monitor MT7976AN's temperature variation. MT7976AN has its dedicated crystal oscillator (XO) circuit. Besides, XO circuit provides an external clock source to other chips in the platform.

The transceiver front-ends are on MT7976AN while the ADC/DAC (Analog-to-Digital Converter/Digital-to-Analog Converter) is in the companion modem chip. The interface drivers/receiver buffers are designed to drive PCB trace loading.

### 1.2 Features

■ MT7976AN is an IEEE WiFi 6 MIMO RF chip which contains 5/6GHz WI-Fi transceiver front-ends in a DRQFN package.

#### 1.2.1 Wi-Fi Transceiver

#### WLAN

- Built-in calibrations for PVT variation
- Supports external PA and LNA for WiFi-5/6GHz

## 3.4 **Digital Logic Characteristics**

MT7976AN's timing characteristics and interface protocols are shown here, including some general comments.

#### **3.4.1** Timing Diagram Convention

Figure 3-1 shows the conventions used with timing diagram throughout this document.

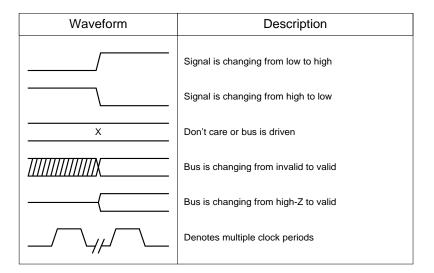

Figure 3-1. Timing diagram conventions

#### 3.4.2 Rising/Falling Time Definition

Figure 3-2 is the rising and falling timing diagram. The actual signal timing curve is related to the external load conditions. See 錯誤! 找不到參照來源。 for the operating conditions of digital logics.

#### 3.4.3 Protocols

There are three main interfaces for MT7976AN:

- 2-wire top control interface: Generally used for all systems (Wi-Fi)
- 12-wire bus: High-speed interface, for Wi-Fi

#### 3.4.3.1 2-Wire

The 2-wire bus of MT7976AN is mainly used as below:

■ Top control interface, the main interface to access Wi-Fi/TOP command registers

The bit number of SDATA depends on different operating conditions, as shown in Figure 3-3.

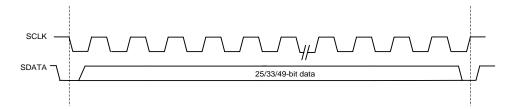

Figure 3-3. 2-wire SPI timing diagram

#### 3.4.3.2 9-bit Bus

MT7976AN has a dedicated 9-bit bus to control the Wi-Fi radio. The related control definitions depend on operating modes and conditions. The protocol is shown in <u>Figure 3-4</u>.

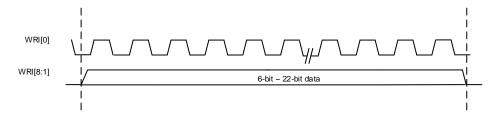

Figure 3-4. Wi-Fi 9-wire SPI access

#### 3.5 MT7976AN TOP Building Blocks

#### 3.5.1 Thermal ADC

A low-speed ADC converts the output of thermal sensor. The temperature coverage range is between -40°C and 120°C. The chip top control may do corresponding adjustment based on such temperature information.

#### 3.6 **Wi-Fi**

MT7976AN Wi-Fi is a high performance and highly-integrated dual-band RF transceiver fully compliant with IEEE 802.11 a/ac/ax/b/g/n standards. MT7976AN features a self-calibration scheme to compensate the process and temperature variation to maintain high performance. The calibration is performed automatically right after the system boot-up.

#### 3.6.1 5/6GHz Wi-Fi Tx

The 5/6GHz transmitter integrates a PA Driver with on-chip balun. The data are digitally modulated in the baseband processor from the companion chip, then up-converted to 5/6GHz RF channels through the DA converter, filter, IQ up-converter and PA Driver.

#### 3.6.2 5/6GHz Wi-Fi Rx

The 5/6GHz Wi-Fi Rx consists of a high linearity, low noise figure single-ended LNA, a quadrature passive mixer and a bandwidth-programmable low-pass filter with DC offset cancellation embedded.

#### 3.6.3 5/6GHz Wi-Fi Sx

A fractional-N frequency synthesizer is implemented to support Wi-Fi LO signal. The frequency synthesizer is capable of supporting various crystal clock frequencies. VCO operates at different freq from RF frequency to avoid any coupling with RF front-end circuitry. An LO generation is employed to divide the VCO signal and generate I/Q quadrature signals.

## 4 XO and Bootstrap

## 4.1 XTAL oscillator

The table below lists the requirement for the XTAL.

Item	Spec.
Nominal Frequency	40MHz
Size	3.2mmx2.5mm
Operating Temperature Range	-40°C to +105°C
Frequency Tolerance (FL)	+/- 7 ppm @ 25°C +/- 3°C
Frequency Stability over Operating Temperature	+/- 15 ppm (referred to the value at 25°C) -40°C to +100°C +/- 20 ppm (referred to the value at 25°C) 100°C to +105°C
Equivalent Series Resistance (ESR)	15 Ω max.
Drive Level(DL)	400uW max
Shunt Capacitance (Co)	3.0 pF max
Load Capacitance (CL)	10 pF
Trim Sensitivity Over Load(Ts)	10~13 ppm/pF

#### **ESD CAUTION**

MT7976AN is ESD (electrostatic discharge) sensitive device and may be damaged with ESD or spike voltage. Although MT7976AN is with built-in ESD protection circuitry, please handle with care to avoid the permanent malfunction or the performance degradation.
